

IN THE CLAIMS:

Please cancel claims 31 and 32 and amend claims 19, 23 and 27 to read as follows:

Claims 1-18 (Canceled).

19. (Currently Amended) In a package comprising a tray with various compartments in which different types of food are present, with one type of food being present in each compartment, which compartments are closed off by a film structure that is sealed to the tray around the openings of the compartments, wherein a part of the film structure is present above each compartment of the tray and wherein at least some of said parts of the film structure are different from each other, the improvement wherein various ones of said parts of the film structure are provided with (a) a material which is gas-permeable, and (b) a material which reacts with gasses in the respective compartments, and (b) which is said materials being disposed at least one of (1) in, and (2) on, some of said parts of the film structure.

20. (Previously Presented) Package according to claim 19, wherein there are perforations in some of the parts of the film structure.

21. (Previously Presented) Package according to claim 19, wherein the film structure is comprised of a first film in which on some parts of this first film at least one of a second film and a sticker is present.

22. (Previously Presented) Package according to claim 19, wherein the film structure is comprised of two or more adjacent film parts with different characteristics.

23. (Currently Amended) In a working method for separately packaging various types of food in a single package, said method comprising the steps of:

(a) placing food on a tray with different compartments open on one side, with one type of food being placed in each compartment;

(b) placing a film structure above the open sides of the compartments, wherein a part of the film structure is placed above each compartment and wherein at least the

characteristics of some of said parts of the film structure are different from each other; and

(c) sealing the film structure to the tray around the openings of the compartments;

the improvement wherein the film structure is processed such that some of the various ones of said parts of the film structure are provided with (a) a material (a) which is gas-permeable, and (b) a material which reacts with gasses in the respective compartments, and (b) which is said materials being disposed at least one of (1) in, and (2) on, some of said parts of the film structure.

24. (Previously Presented) Working method according to claim 23, wherein some of the parts of the film structure are irradiated.

25. (Previously Presented) Working method according to claim 23, wherein perforations are made in some of the parts of the film structure.

26. (Previously Presented) Working method according to claim 23, wherein the film structure is produced by taking a

first film and placing on parts thereof at least one of a second film and a sticker.

27. (Currently Amended) Working method according to claim 23, wherein the film structure is produced by fastening two films on each other, ~~after which further comprising the step of locally removing one of the two films is removed locally.~~

28. (Previously Presented) Working method according to claim 23, wherein the film structure is produced of two or more films with different characteristics which are adjacent to each other.

29. (Previously Presented) Working method according to claim 23, wherein at least one of the formation and processing of the film structure takes place before food is placed on the tray.

30. (Previously Presented) Working method according to claim 23, wherein before the film structure is processed, the characteristics of the food are first determined, after which at least one of the formation and processing of the

film structure takes place in accordance with the characteristics of the food.

31.-32. (Cancelled)

Please add the following new claims:

33. (New) Package according to claim 19, wherein parts of said film structure are provided with a material which passively manipulates radiation applied to the tray.

34. (New) Package according to claim 23, wherein parts of said film structure are provided with a material which passively manipulates radiation applied to the tray.
